Quality Policy

Trafileria Lecchese S.r.l. specializes in the production and marketing of carbon and low-alloy steel drawn wires (phosphate-coated wires and wires with protective zinc or zinc-aluminum alloy coatings) intended for high value-added applications across various manufacturing sectors. Experience, technical expertise, reliability, and the continuous pursuit of quality have always formed the foundational pillars of our business operations.

Management at Trafileria Lecchese S.r.l., recognizing that operational excellence and environmental responsibility are fundamental strategic drivers for competing in international markets, formally renews its commitment to achieving total customer satisfaction, ensuring full compliance with the stringent requirements of target markets, and integrating sustainability into its industrial dynamics.

To this end, Management promotes a process of continuous improvement within its Integrated Management System, actively committing to:

- **Product Quality and Rigorous Inspection:** Ensure the manufacturing of drawn wires to the highest quality standards through the ongoing enhancement of process and laboratory controls, applying increasingly strict and rigorous testing procedures across all stages of wire drawing and surface treatments to meet growing market demands.
- **Selection and Control of Raw Materials (Wire Rod):** Manage the external procurement of wire rod and material resources with utmost care through rigorous supplier qualification, raw material traceability, and thorough verification of the chemical-physical and mechanical properties of purchased lots.
- **Environmental Sustainability and Carbon Footprint (CO_2) Reduction:** Promote the progressive decarbonization of production processes and surface treatments through the reduction of direct and indirect CO_2 emissions, optimization of energy efficiency, proper resource management, and the adoption of low environmental impact technologies.
- **Customer Satisfaction and Centrality:** Meet and exceed the expectations of customers and interested parties by providing a flexible, prompt, customized service and products with high and consistent quality compliance.
- **Legal and Regulatory Compliance:** Ensure consistent and rigorous compliance with legal requirements, current environmental regulations, and all applicable normative, technical, and contractual requirements.
- **Enhancement of Human Capital:** Promote professional growth, continuous training, and awareness of personnel regarding quality, safety, and environmental protection.
- **Monitoring and Strategic Review:** Define and periodically review, within the framework of the Management Review, performance indicators and quantifiable objectives to measure process effectiveness, environmental impact, and the validity of corporate improvement plans.

Management believes that the pursuit of Quality and Environmental Sustainability is not an isolated act, but a collective commitment shared by the entire corporate structure and the value chain. The Board of Directors assumes the responsibility of providing all human, technological, and economic resources necessary to achieve these objectives.
